

**ROLL CLAMPS
CONCRETE PIPE CLAMPS**

S18

Roll clamps are intended for handling cylindrical goods.

Paper roll clamps operate with one long hydraulically adjustable arm and one short adjustable arm. All clamps have a rotation range of 360° continuous in both directions.

The contact pads of the arms are serially coated with corundum. There are different types of coating available.

Concrete pipe clamps operate with one long hydraulically adjustable arm and one short manually adjustable arm. The rotation range of 360° is continuous in both directions. All clamps are serially equipped with rubber coated contact pads.

- Contact pads oscillating, incl. corundum coating.
- Surcharge for PU coating (not for tissue clamps) € 1,210.-
- Other coatings on request.
- Surcharge for tissue clamping system up to RK 16 € 1,315.-
- Surcharge for tissue clamping system up to RK 25 € 1,420.-
- Surcharge for tissue clamping system up to RK 40 € 1,525.-

- Surcharge for two-roll clamping system € 1,180.-
- Surcharge for adjustable pressure relief valve € 320.-
- Surcharge for pressure gauge € 120.-
- Other clamping ranges on request.
- Separate sideshift on request.
- Version of tire clamp on request.

S18

Paper roll clamp

Tire clamp

Standard paper roll clamps are provided with a long hydraulically adjustable arm as well as a short, manually adjustable arm. If big and small rolls have to be handled in turns, we recommend one short, hydraulic arm. The simultaneous handling of two rolls with different diameters requires the two-roll clamp system (split arm).

Standard values for residual load capacity of lift trucks**

** The load capacity applies to lifting heights up to 3300 mm; specifications for greater lifting heights on request.

* Assumed dimensions

- For greater load centers, where the lift truck has a higher residual load capacity than the attachment, those values, upon the exceedance of which the attachment would be overloaded, are indicated in brackets ().
